

Inbound Quality Inspection

Version 2.3

Effective date: 1 March 2026

Purpose

This procedure starts when a delivery arrives at the inbound door and ends when the accepted lot is released to inventory or the rejected lot is dispositioned.

Roles

Receiving Clerk - receives the delivery and stages the cartons.

Quality Inspector - inspects the sample and records the result.

Supervisor - decides the disposition of a failed lot.

Inventory Clerk - releases a hold and posts the accepted quantity.

Procedure

3.1 The Receiving Clerk matches the packing list to the purchase order and records the receipt number on the inbound log.

3.2 The Receiving Clerk stages the cartons in the inbound inspection area and applies a hold label.

3.3 Someone on the receiving team photographs cartons that arrive damaged before they are moved.

3.4 The Quality Inspector inspects a sample using the sampling table in Appendix A and records the result on the inspection form.

3.5 Decision: Does the sample meet the acceptance criteria?

If the sample meets the acceptance criteria, continue at step 3.9.

If the sample does not meet the acceptance criteria, continue at step 3.6.

3.6 The Quality Inspector quarantines the lot and notifies the Supervisor.

3.7 The Supervisor chooses a disposition for the quarantined lot.

If the lot is returned to the supplier, the procedure ends for that lot.

If the lot is sent back for inspection, continue at step 3.8.

3.8 The Receiving Clerk replaces the hold label. The lot returns to step 3.4.

3.9 The Inventory Clerk releases the hold and posts the accepted quantity to inventory.

Procedure: Damaged freight claim

This separate procedure starts when damage is found after the driver has left and ends when the claim is filed.

4.1 The Receiving Clerk sets the damaged cartons aside and keeps the packaging.

4.2 The Supervisor reviews the photos and approves the claim.

4.3 The Inventory Clerk files the carrier claim and records the claim number.
